

Foam::functionObjects  
::gradPsiError::gradPsiError

Foam::explicitGradientFv  
PatchField::write

write

```
graph LR; A[Foam::functionObjects::gradPsiError::gradPsiError] --> D[write]; B[Foam::explicitGradientFvPatchField::write] --> D;
```

The diagram illustrates a call graph where two function objects are invoked. The first box, 'Foam::functionObjects::gradPsiError::gradPsiError', and the second box, 'Foam::explicitGradientFvPatchField::write', both have arrows pointing to a central grey box labeled 'write'. This indicates that both objects perform a write operation.
